Практическое задание

Веб-технологии: уязвимости и безопасность. Вебинарный курс

Урок 1. Введение в веб

- sudo apt install curl
- (brew install curl)
- curl https://geekbrains.ru
- ./request.py
- cat request.py
- sudo nginx
- ps aux | grep nginx
- Firefox > towerinfog.ml/helloworld.html
- curl towerinfog.ml/helloworld.html
- sudo apt-get install nginx

1.Установите VirtualBox и виртуальную машину с Ubuntu. Все дальнейшие задания рекомендуется делать на Ubuntu.

2. Установите и запустите nginx. Введите в адресной строке браузера http://localhost и убедитесь, что nginx показывает приветственную страницу. Найдите ваш запрос к домашней странице в логах nginx.

```
Ubuntu_Server_64 [Running] - Oracle VM VirtualBox

ndreim@andreim–server:~$ sudo apt install nginx_
```

- sudo systemctl status nginx
- sudo systemctl start nginx
- sudo ufw allow in 80/tcp
- localhost
- cd /var/log/nginx
- ls
- tail access.log

Welcome to nginx!

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to <u>nginx.org</u>. Commercial support is available at <u>nginx.com</u>.

Thank you for using nginx.

```

3(*). Установите Burp Suite в качестве прокси. Попробовать основные функции: history, interception, sitemap, repeater.

• sudo bash /Downloads/burpsuite_community_linux_v2023_5_2.sh
